Practical – V

Roll No.: T018	Name: Sachin Ramesh Mehta
Class: TYIT	Batch: 1
Date of Assignment: 19/08/2026	Date/Time of Submission: 19/08/2026

d. Fetch sample data from a public API using Axios.

Code:

app.jsx:

```
import axios from "axios";
import { useEffect, useState } from "react";

function App() {
  const [products, setProducts] = useState([]);

  useEffect(() => {
    axios.get("https://dummyjson.com/products")
      .then((response) => {
        setProducts(response.data.products);
      });
  }, []);

  return (
    <div>
      <h1>Product List</h1>
      <hr />
      {products.map((product) => (
        <div key={product.id}>
          <h2>{product.title}</h2>
          <p>Price: ${product.price}</p>
        </div>
      ))}
    </div>
  );
}
```

export default App;

Output:

Product List

Essence Mascara Lash Princess

Price: \$9.99

Eyeshadow Palette with Mirror

Price: \$19.99

Powder Canister

Price: \$14.99

Red Lipstick

Price: \$12.99

Red Nail Polish

Price: \$8.99

Calvin Klein CK One

Price: \$49.99

Chanel Coco Noir Eau De

Price: \$129.99

Dior J'adore

Price: \$89.99

Price: \$79.99

Annibale Colombo Bed

Price: \$1899.99

Annibale Colombo Sofa

Price: \$2499.99

Bedside Table African Cherry

Price: \$299.99

Knoll Saarinen Executive Conference Chair

Price: \$499.99

Wooden Bathroom Sink With Mirror

Price: \$799.99

Apple

Price: \$1.99

Beef Steak

Price: \$12.99

Cat Food

Price: \$8.99

Chicken Meat

Price: \$9.99

Cooking Oil

Price: \$4.99

Cucumber

Price: \$1.49

e. Display fetched data in table or list format.

Code:

app.jsx:

```
import axios from "axios";
```

```
import { useEffect, useState } from "react";
```

```
function App() {  
  const [products, setProducts] = useState([]);
```

```
  useEffect(() => {  
    axios  
      .get("https://dummyjson.com/products")  
      .then((response) => {  
        setProducts(response.data.products);  
      });  
  }, []);
```

```
  return (  
    <div>  
      <h1>Product List</h1>  
      <hr />  
  
      <table border="1" cellPadding="10">  
        <thead>  
          <tr>
```

```

        <th>ID</th>
        <th>Product Name</th>
        <th>Category</th>
        <th>Price</th>
        <th>Rating</th>
        <th>Stock</th>
      </tr>
    </thead>

    <tbody>
      {products.map((product) => (
        <tr key={product.id}>
          <td>{product.id}</td>
          <td>{product.title}</td>
          <td>{product.category}</td>
          <td>${product.price}</td>
          <td>{product.rating}</td>
          <td>{product.stock}</td>
        </tr>
      ))}
    </tbody>
  </table>
</div>
);
}

```

export default App;

Output:

Product List					
ID	Product Name	Category	Price	Rating	Stock
1	Essence Mascara Lash Princess	beauty	\$9.99	2.56	99
2	Eyeshadow Palette with Mirror	beauty	\$19.99	2.86	34
3	Powder Canister	beauty	\$14.99	4.64	89
4	Red Lipstick	beauty	\$12.99	4.36	91
5	Red Nail Polish	beauty	\$8.99	4.32	79
6	Calvin Klein CK One	fragrances	\$49.99	4.37	29
7	Chanel Coco Noir Eau De	fragrances	\$129.99	4.26	58
8	Dior J'adore	fragrances	\$89.99	3.8	98
9	Dolce Shine Eau de	fragrances	\$69.99	3.96	4
10	Gucci Bloom Eau de	fragrances	\$79.99	2.74	91
11	Annibale Colombo Bed	furniture	\$1899.99	4.77	88
12	Annibale Colombo Sofa	furniture	\$2499.99	3.92	60

f. Implement search or filter functionality on displayed data.

Code:

```

import axios from "axios";
import { useEffect, useState } from "react";
function App() {

```

```

const [products, setProducts] = useState([]);
const [search, setSearch] = useState("");

useEffect(() => {
  axios
    .get("https://dummyjson.com/products")
    .then((response) => {
      setProducts(response.data.products);
    });
}, []);

const filteredProducts = products.filter((product) =>
  product.category.toLowerCase().includes(search.toLowerCase())
);

return (
  <div>
    <h1>Product Category Search</h1>

    <input
      type="text"
      placeholder="Search category"
      value={search}
      onChange={(e) => setSearch(e.target.value)}
    />

    <hr />

    {filteredProducts.map((product) => (
      <div key={product.id}>
        <h2>{product.title}</h2>
        <p>Category: {product.category}</p>
        <p>Price: ${product.price}</p>
        <hr />
      </div>
    ))}
  </div>
);
}

```

export default App;

Output:

Product Category Search

Essence Mascara Lash Princess

Category: beauty
Price: \$9.99

Eyeshadow Palette with Mirror

Category: beauty
Price: \$19.99

Powder Canister

Category: beauty
Price: \$14.99

Red Lipstick

Category: beauty
Price: \$12.99

Red Nail Polish

Category: beauty
Price: \$8.99

Category: beauty
Price: \$14.99

Red Lipstick

Category: beauty
Price: \$12.99

Red Nail Polish

Category: beauty
Price: \$8.99

e. Display a list of items stored in the state using `map()`.

Q. Develop a React application to create a Movie Watchlist. Use the `useState` hook to store an array of movie objects containing the movie name, genre, and rating. Use the `map()` method to iterate through the array and dynamically display the details of each movie on the webpage.

The application should display:

- **Movie Name**
- **Genre**
- **Rating**

Code:

```
import { useState } from "react";
function App() {
  const [movies] = useState([
    {
      name: "Avengers: Endgame",
      genre: "Action",
      rating: 9
    },
    {
      name: "Inception",
      genre: "Sci-Fi",
      rating: 8.8
    },
    {
      name: "Interstellar",
      genre: "Sci-Fi",
      rating: 9
    },
    {
      name: "3 Idiots",
      genre: "Comedy",
      rating: 8.4
    }
  ]);
}
```

```
return (  
  <div>  
    <h1>Movie Watchlist</h1>  
  
    {movies.map((movie, index) => (  
      <div key={index}>  
        <h2>{movie.name}</h2>  
        <p>Genre: {movie.genre}</p>  
        <p>Rating: {movie.rating}</p>  
        <hr />  
      </div>  
    ))}  
  </div>  
);  
}
```

export default App;

Output:

Movie Watchlist
Avengers: Endgame Genre: Action Rating: 9
Inception Genre: Sci-Fi Rating: 8.8
Interstellar Genre: Sci-Fi Rating: 9
3 Idiots Genre: Comedy Rating: 8.4
